INTRODUCTION

This report has been prepared to serve two needs; first, to have the data most frequently requested by other agencies readily available for distribution, and second, to provide a convenient source of historical reference material for use by the Department's staff and the Transportation Commissioners.

This summary is not intended to be detailed but is limited to data of general interest and which, experience has shown, to be most in demand.

STATISTICAL SUMMARY

Transportation Systems

As shown in Figure I, total highway mileage in the State is 48,551 miles. This represents mileage which, as of December 31, 1985, was open to the public and maintained by a government agency. Mileage on the State System totals 5,661 miles. County mileage amounts, 20,842, and city mileage totals 5,598 miles. Roads serving areas owned by the Federal government amounted to 16,450 miles.

Progress continues toward completion of the Interstate System. Of the 938 miles of Interstate Highway to be completed, 814 miles or 87 percent of the total system, is complete and open to traffic. Forty-eight miles of two lane "stage construction" are open to traffic. Sixty-two miles of Interstate are under construction and 14 miles are in the design stage. This represents the status of the Interstate System as of July 1, 1986.

A detailed stratification of total mileage by system, political jurisdiction and surface type is provided in the appendix of this report.

As outlined in Figure I, Vehicle Miles of Travel (VMT) increased by about four percent from 11.5 billion in 1984 to 12.0 in 1985. Comparing usage with total highway mileage, the State Highway System serves 70 percent of the total annual travel on 12 percent of the mileage. City highways accommodate 19 percent of the annual travel on 11 percent of the mileage and county roads serve 11 percent of the travel on 43 percent of the total mileage.

Figure II illustrates the growth of the various systems comprising the State Highway System. The primary System continues to be the predominant system with the urban and Secondary Systems accounting for a smaller part of the total inventory.

Figure III illustrates the change in traffic accidents, injuries and fatalities on Utah's highways. The number of deaths dropped four percent from 315 in 1984 to 303 in 1985, but the number of injuries increased four percent from 20,490 to 21,350. Accidents also increased one percent from 47,490 to 47,870. The increased accidents with the corresponding reduction in fatalities indicate accidents during 1985 were of a less severe "fender bender" type caused primarily by adverse weather conditions. The death rate also dropped by eight percent from 2.74 deaths per 100 million vehicle miles of travel in 1984 to a rate of 2.52 in 1985.

Over the last decade the number of deaths and the death rate have significantly declined on Utah's highways. These long term reductions, in light of substantial travel growth, are attributable to a number of factors. However, to a large extent these reductions are due to the Interstate System, which by all measurements is a safer, more efficient transportation facility than conventional highways.

STATISTICAL SUMMARY

Transportation Systems

As shown in Figure I, total highway mileage in the State is 48,551 miles. This represents mileage which, as of December 31, 1985, was open to the public and maintained by a government agency. Mileage on the State System totals 5,661 miles. County mileage amounts, 20,842, and city mileage totals 5,598 miles. Roads serving areas owned by the Federal government amounted to 16,450 miles.

Progress continues toward completion of the Interstate System. Of the 938 miles of Interstate Highway to be completed, 814 miles or 87 percent of the total system, is complete and open to traffic. Forty-eight miles of two lane "stage construction" are open to traffic. Sixty-two miles of Interstate are under construction and 14 miles are in the design stage. This represents the status of the Interstate System as of July 1, 1986.

A detailed stratification of total mileage by system, political jurisdiction and surface type is provided in the appendix of this report.

As outlined in Figure I, Vehicle Miles of Travel (VMT) increased by about four percent from 11.5 billion in 1984 to 12.0 in 1985. Comparing usage with total highway mileage, the State Highway System serves 70 percent of the total annual travel on 12 percent of the mileage. City highways accommodate 19 percent of the annual travel on 11 percent of the mileage and county roads serve 11 percent of the travel on 43 percent of the total mileage.

Figure II illustrates the growth of the various systems comprising the State Highway System. The primary System continues to be the predominant system with the urban and Secondary Systems accounting for a smaller part of the total inventory.

Figure III illustrates the change in traffic accidents, injuries and fatalities on Utah's highways. The number of deaths dropped four percent from 315 in 1984 to 303 in 1985, but the number of injuries increased four percent from 20,490 to 21,350. Accidents also increased one percent from 47,490 to 47,870. The increased accidents with the corresponding reduction in fatalities indicate accidents during 1985 were of a less severe "fender bender" type caused primarily by adverse weather conditions. The death rate also dropped by eight percent from 2.74 deaths per 100 million vehicle miles of travel in 1984 to a rate of 2.52 in 1985.

Over the last decade the number of deaths and the death rate have significantly declined on Utah's highways. These long term reductions, in light of substantial travel growth, are attributable to a number of factors. However, to a large extent these reductions are due to the Interstate System, which by all measurements is a safer, more efficient transportation facility than conventional highways.

Associated with the volume of travel on a highway system is the type of roadway surface needed to provide an adequate level of service. As illustrated by Figures IV and V, about 45 percent of the total state, city, and county roads are bituminous or higher grade surfaces.

Figure VI indicates what is happening to the ride quality of Utah's non-interstate highway system. The Pavement Serviceability Index (PSI) is a numerical rating ranging from very poor (1), to very good (5), depending on pavement roughness or ride quality. Recent highway surface tests indicate a significant improvement in road mileage falling in the very poor category. In the 1982-83 test years, 23 percent of the non-interstate mileage was in very poor condition. Tests made in 1984 and 1985 indicate 13% of the mileage is in very poor condition, a reduction of 44%. However, mileage in the poor category increased by 3%, and since most of the mileage is in this category, the trend line shown in figure VI continued to decline. The PSI dropped from 2.88 to 2.84.

The improvement in roads classified as very poor was due to the awarding of substantially more resurfacing projects during the 1984 and 1985 construction seasons. Funds for these additional projects was made possible by the three-cent motor fuel tax increase effective July 1, 1984. Unfortunately, since the tax was levied, the growth of the construction cost index has surpassed the growth of highway user taxes and fees, and funds available for 1987 resurfacing projects have declined to 1982-83 levels. Also, the transfer of Transportation Funds to help cover the anticipated short fall in the General Fund significantly reduced funds available for Highway Rehabilitation Projects.

Transportation Fuel Use

Figure VII illustrates growth patterns on a fiscal year basis related to the consumption of gasoline, gasohol, special fuels and aviation fuel.

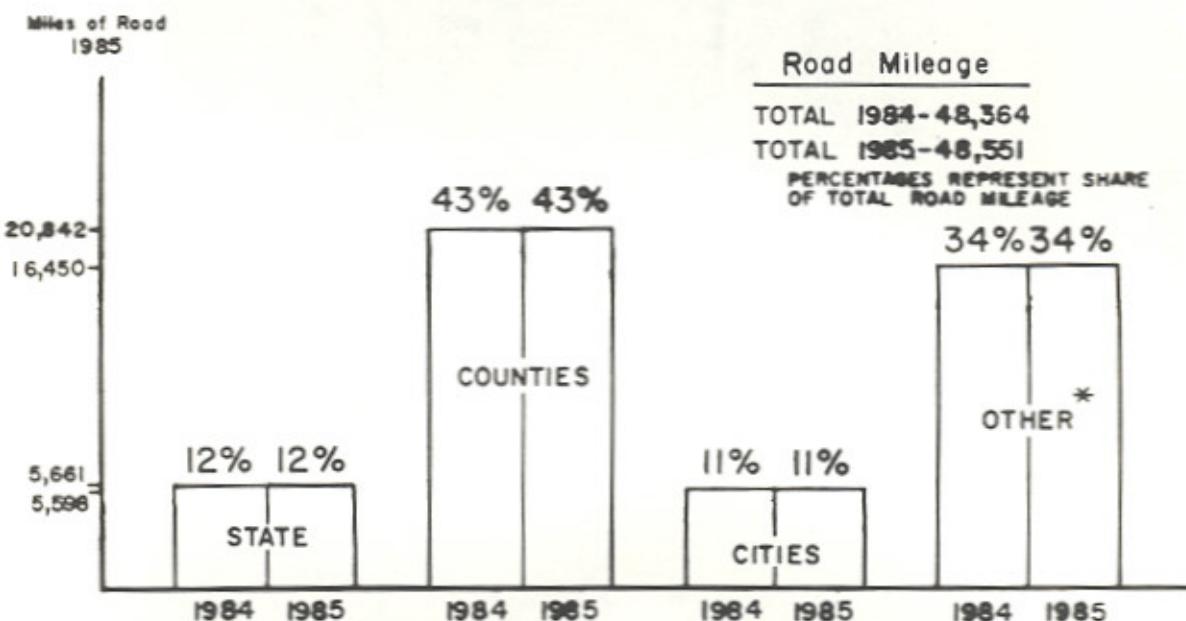

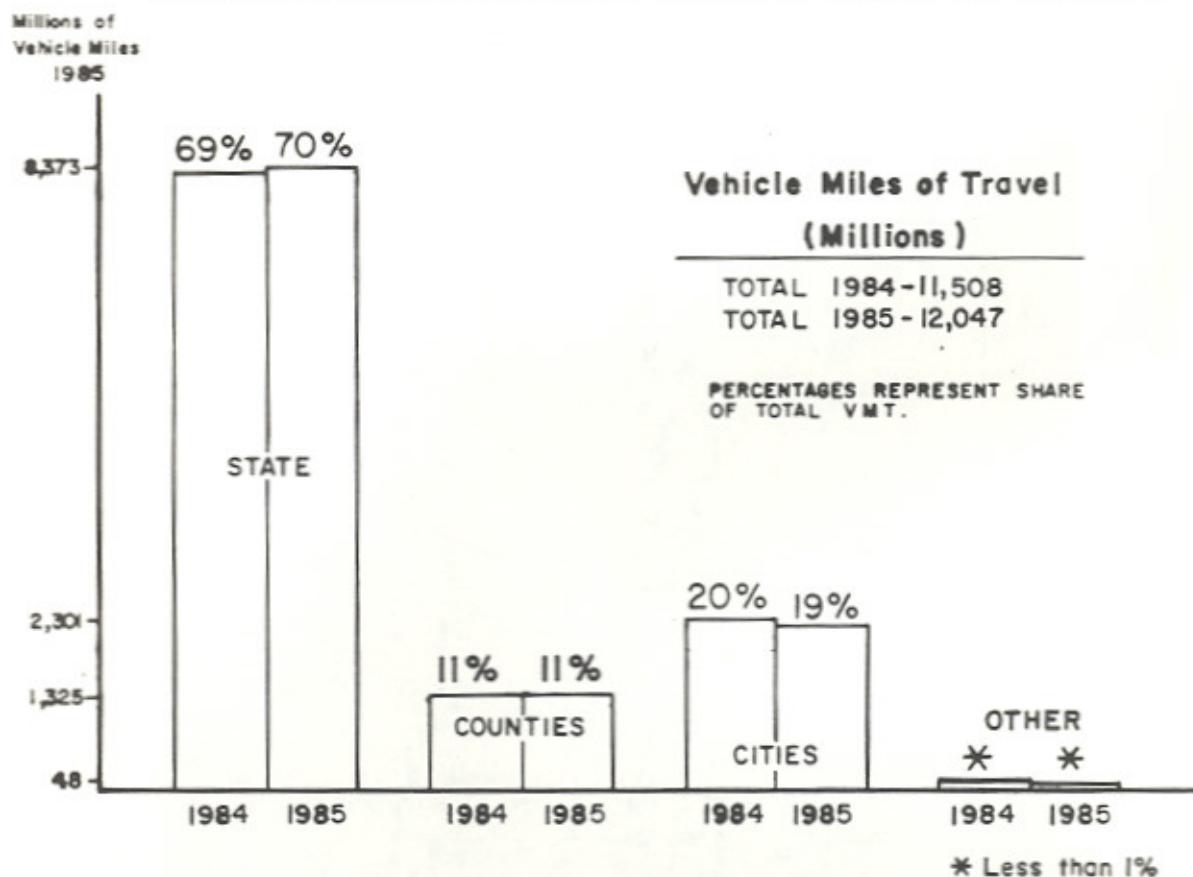

Gasoline sales in fiscal year 1986 increased 1.4% from the previous year, from 644.1 million gallons to 653.4 million gallons. Gasohol sales declined substantially from 14 million gallons in 1985 to 4.9 million gallons in 1986. Gasohol sales have declined significantly since the repeal of the state five cent per gallon tax exemption on blended fuel beginning July 1, 1984. The total sales of both motor fuels (gasoline and gasohol) remained about the same as the previous year at 658 million gallons.

Special fuel increased significantly from 129 million gallons in 1985 to 138 million gallons in 1986, an increase of seven percent. Changes in the taxable gallons of special fuel primarily reflects the renewed growth of the Interstate Trucking Industry.

Taxable gallons of aviation fuel increased substantially from 111 million gallons in 1985 to 128 million gallons in 1986, an increase of fifteen percent. This gain in fuel consumption is an indication of increased activity at the Salt Lake City International Airport.

EVOLUTION OF THE STATE ROAD SYSTEM WITH FEDERAL-AID CLASSES

FIGURE II

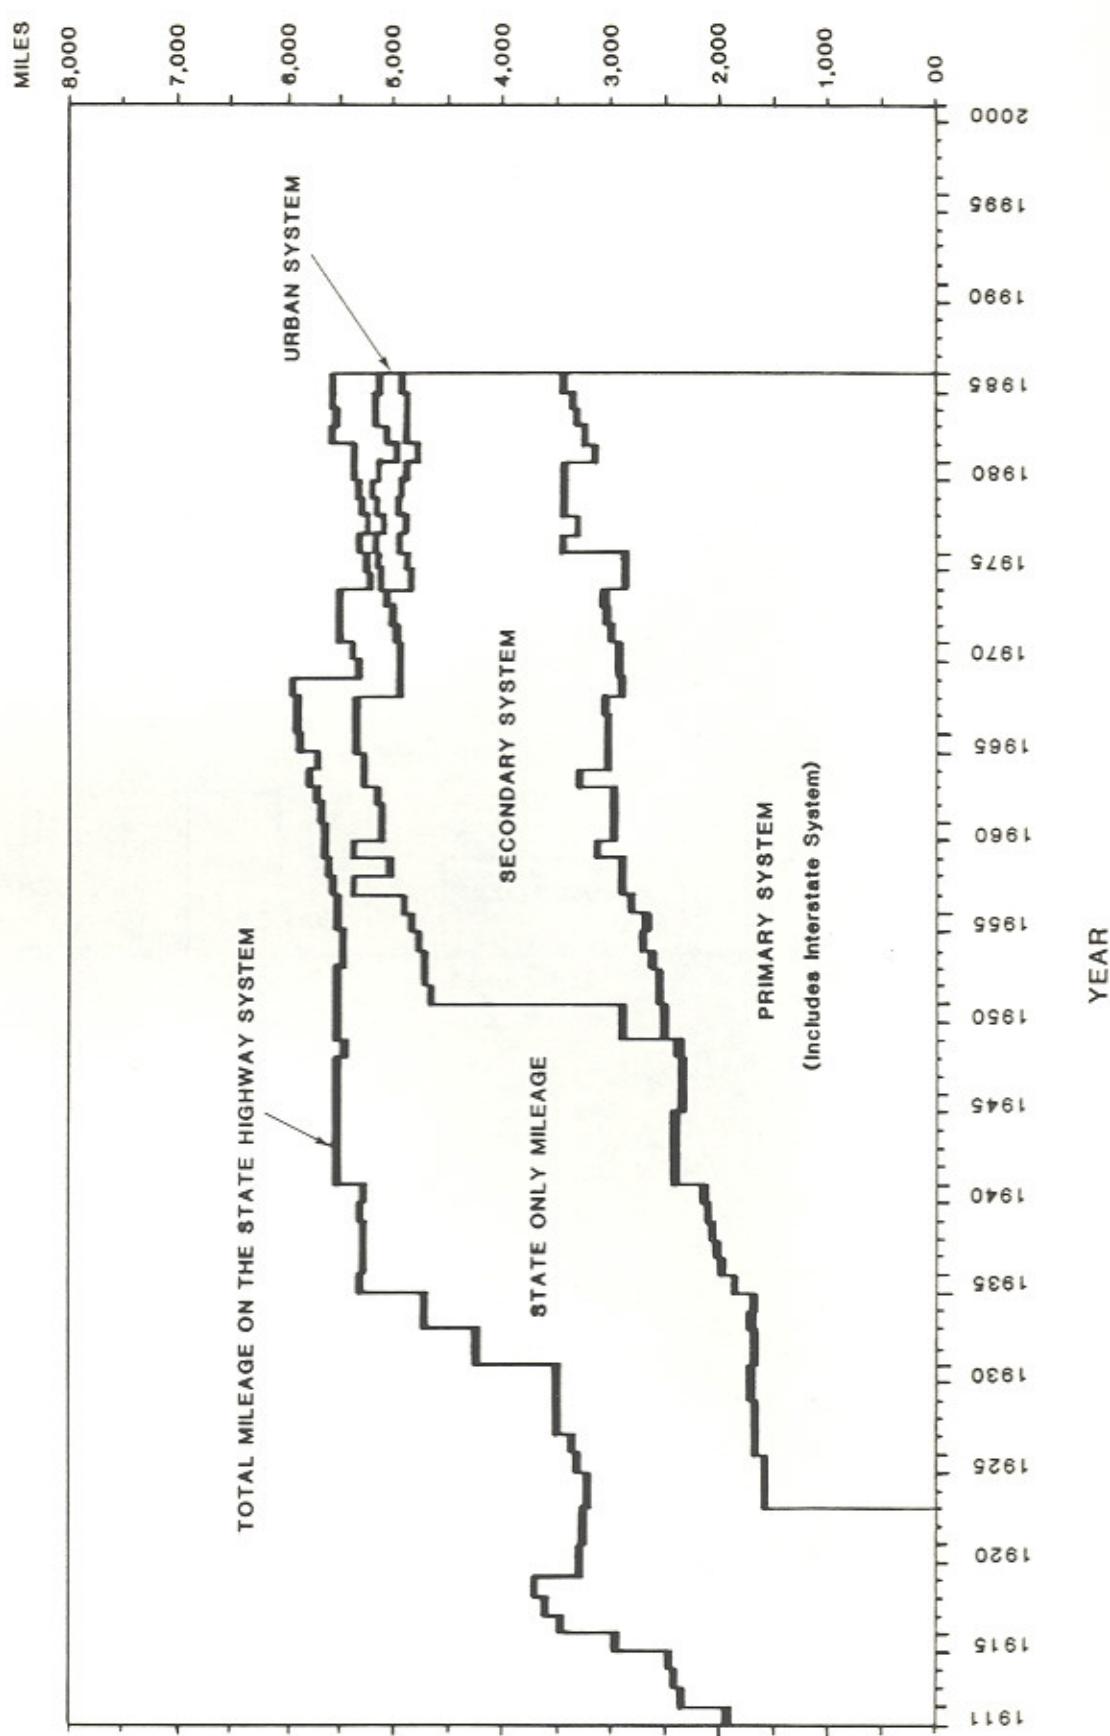

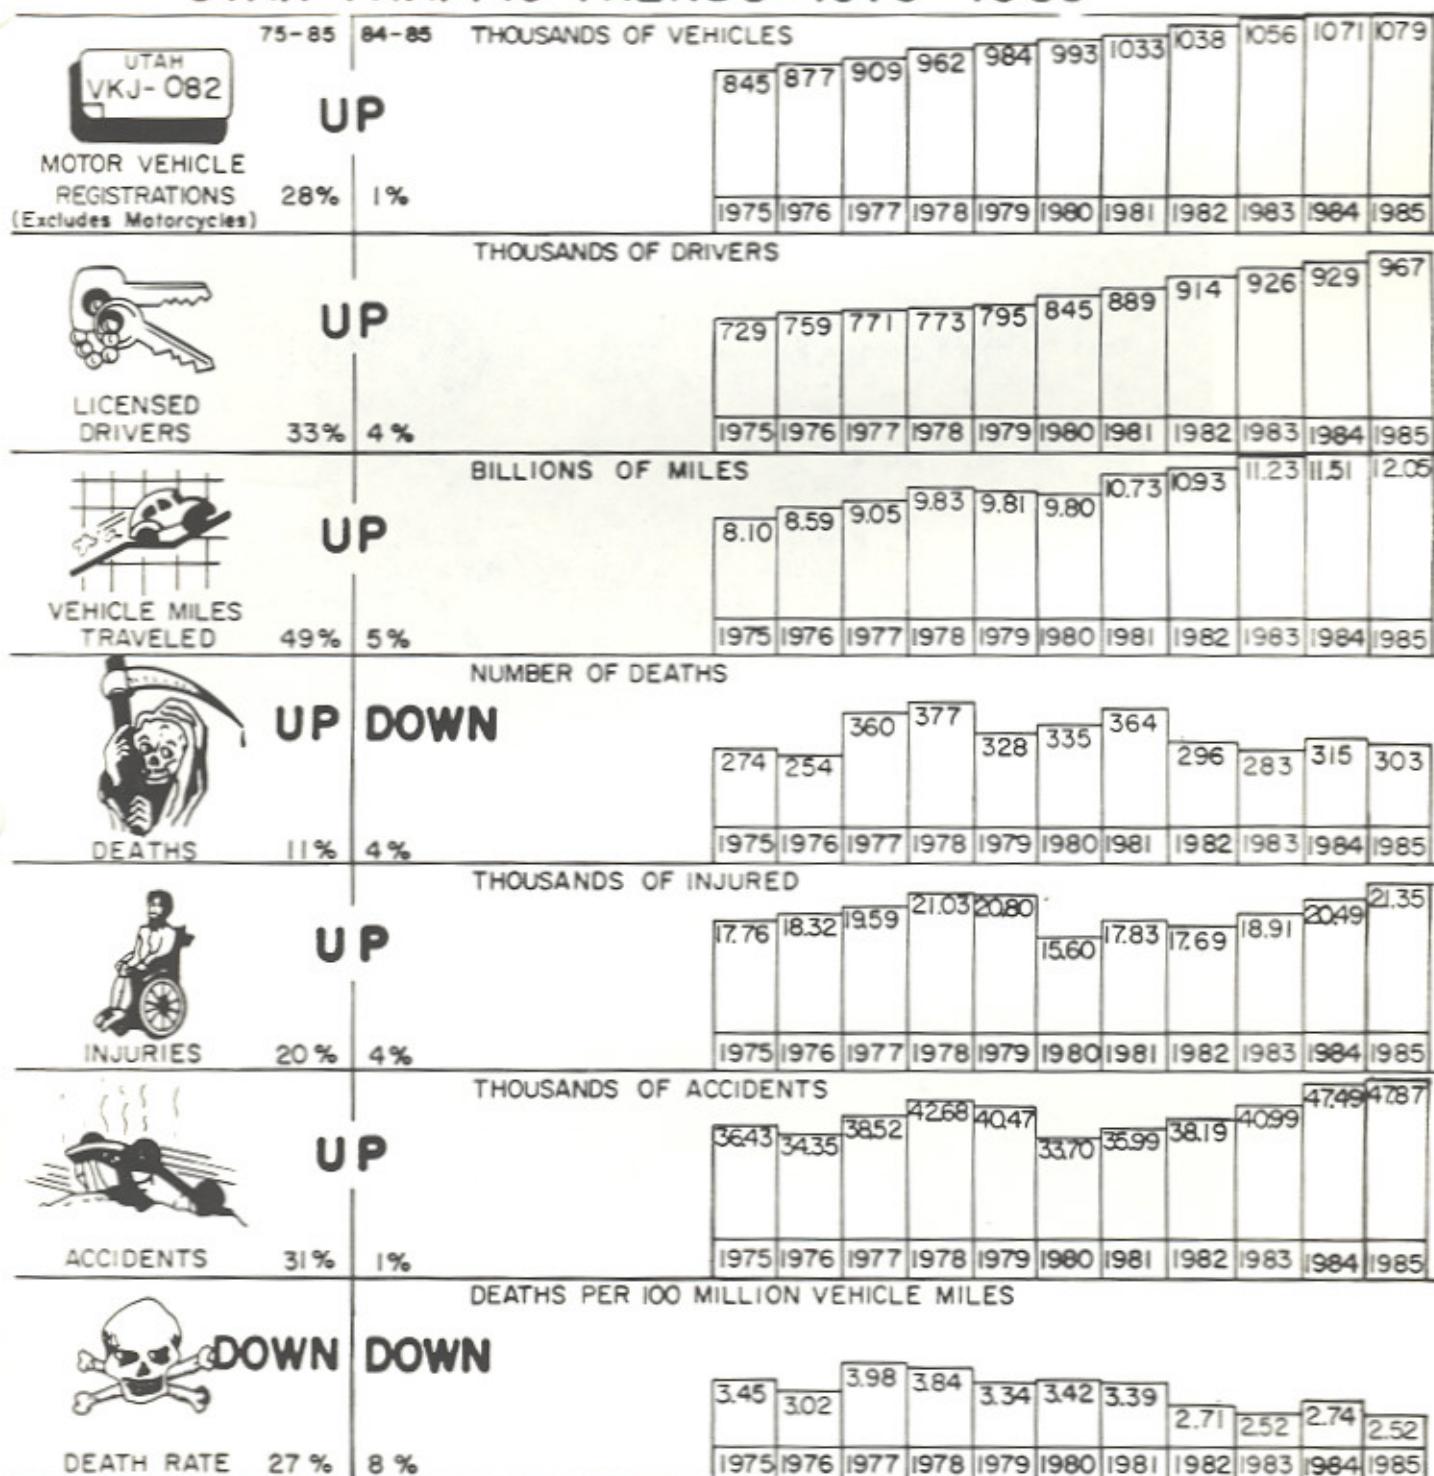

FIGURE III

UTAH TRAFFIC TRENDS: 1975-1985

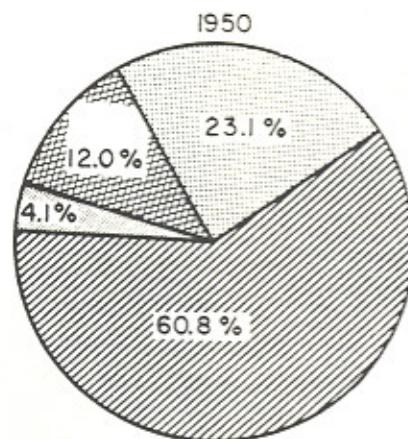

DATA SOURCE : The Utah Department of Transportation compiles and submits information annually to the Federal Highway Administration (FHWA) for publication in their annual report Highway Statistics. The current year's figures for registered vehicles and licensed drivers may be adjusted in future reports to coincide with future FHWA publications. For the year 1981 vehicle miles of travel was determined from a new computerized system, which provides more detailed information on the sections of highway comprising the various systems. As shown, the substantial growth in 1981 travel reflects the change in the method of compiling the data and not actual growth.

FIGURE VII
FUEL CONSUMPTION IN UTAH

FISCAL YEAR

Transportation Finances

The ten sources of revenue comprising total state highway user receipts and their respective growth rates between fiscal years 1985 and 1986 are shown in Table 1.

Revenue generated by the motor fuel tax increased by 3.2 percent in 1986, from \$89.3 million in 1985 to \$92.1 million. The \$2.8 million increase was due, in most part, to the one month tax differential between the two years. The three-cent tax increase became effective July 1, 1984. In fiscal year 1985, the tax increase was collected for eleven months due to the one month allowance provided distributors in submitting their tax returns. In fiscal year 1986, the tax increase was collected for the entire twelve months. The one month in FY 85' in which the tax increase was not collected accounted for \$1.9 million of the \$2.8 million revenue increase during the year. The balance of \$0.9 million was due to the slight increase in fuel consumption.

The price of gasoline, which dropped substantially at the beginning of 1986 did not significantly impact fuel consumption. In April, the price of gasoline declined to 79 cents from a price at the beginning of the year of \$1.20, a reduction in price of 34%. Since April prices have continued a general decline, however, gasoline consumption has shown only a slight increase. From April through September of 1986, consumption has only increased one percent from the same period the previous year. Also, the first quarter of fiscal year 1987 indicates that motor fuel tax receipts are less than one percent ahead of the previous year, even though motor fuel prices are at a lower level than they have been for the past several years.

Overall State Highway Revenue increased four percent, from \$140.9 million to \$146.2 million. Of the 5.3 million gain in revenue, gasoline tax accounted for \$2.8 million, special fuel tax generated \$1.6 million and the balance of \$0.9 million, was generated primarily by the Vehicle Registration Fee, the Highway Use Tax, and the Proportional Registration Fee. Special Transportation Fees and Temporary Permit Fees declined in 1986.

The reduction in the Special Transportation Fee, which is primarily an overweight permit fee applied to heavy trucks, amounted to \$395,000. This significant decline in revenue is due to the elimination of a specific truck axle weight category (category I) which places an excessive amount of weight on the axles, and in the past required an overweight permit. Tractor-trailers with tandem axle-weight of 36,000 lbs. are no longer in compliance with Federal and State Regulations. Carriers have shifted to axle weights which are less damaging to highways and meet legal requirements.

Shown in Table 2 is the distribution of State Highway User revenue in fiscal year 1986. The transfers to other state agencies amounted to \$17.7 million. The previous year, \$16.3 million was allocated to other state agencies. The increase of \$1.4 million was due to an increase of \$553,000 to the Driver's License Division, \$310,000 to General Government Overhead, and \$590,000 to the Highway Patrol.

Funds transferred to the Driver's License Division amounted to \$5,878,927 whereas, Driver's License Fee receipts totalled \$4,776,107. The difference of \$1,102,820 represents the subsidizing of the Driver's License Division with other highway user revenue. The subsidy continues even though the Driver's License Fee was doubled May 1, 1982.

Funds allocated to cities and counties amounted to \$32.1 million in fiscal year 1986. This amounts to an increase of 2.6 % over the previous year's allocation of \$31.3 million. Funds distributed to individual cities and counties during fiscal year 1986 are shown in the appendix of this report. Table 4 provides the split between cities and counties of the 1985 allocation and Table 5 indicates the history of allocations to the B & C Fund.

The Department of Transportation received 66 percent or \$96.4 million of the total highway user revenue collected in fiscal year 1986. The previous year the Department received \$93.4 million. Of the \$5.2 million increase in highway user revenue in 1986, the Department received \$3.0 million, cities and counties received \$0.8 million and other state agencies received an increase of \$1.4 million. Shown in Table 3 is a history of the distribution of total highway user revenue between UDOT, cities and counties, and other state agencies.

Table 6 indicates the distribution of Aeronautics revenue. In fiscal year 1986, \$5.1 million was collected from the four cents tax on aviation fuel, and \$17,841 was collected from license fees and rental fees paid on airplanes maintained by the Aeronautics Division. Revenue from the four cents fuel tax increased 15 percent from the previous year's amount of \$4.4 million. Three of the four cents collected is returned to the airport from which the tax is collected. The remaining one cent, plus other aviation revenue, is used by the Division of Aeronautics for administration, planning and grants to local sponsors for airport improvements.

Table 7 provides a summary of city and town street fund revenue and expenditures for 1985. Table 8 provides a similar analysis for the county road funds. Figures VIII and IX indicate the relative significance of the various revenue sources and expenditures as they concern city and county funds. It should be noted that these summaries for city and county street and road funds represent information extracted from statistical planning reports as submitted to the Federal Highway Administration. The information has not been derived from city and county financial statements.

As shown in Table 9, Federal-aid Highway Funds apportioned to Utah in fiscal year 1986 amounted to \$154.8 million. This is a reduction of \$66.3 million from the previous year's apportionment of \$221.1 million. The 1985 apportionment was unusually high because it included one and a half years of Regular Interstate Apportionments due to Congress holding back half the 1984 apportionment until 1985. The 1985 Apportionment also included Interstate Discretionary Funds of \$25 million compared with no Discretionary Funds available in 1986.

Table 10 provides a detailed breakdown of the various categories of Federal-aid programs and their status as of June 30, 1986. Tables 11 thru 11H provide an annual history of Federal-aid funds obligated by the Department.
